

Bowsprits the next step

NEW SURFACE MATERIAL FOR POWERBOAT BOWSPRITS

Båtsystem renown bowsprits have all received a welcoming face-lift. The look is now harmonised with the same type of teak and stainless steel frames. Screws are of a countersink design and the sailing bowsprits have a new type of an even stronger Code-0 attachment.

In order to encourage the conservation of the rain forest, BlackLine (BL) has now become standard, while 24mm teak can still be ordered as an upgrade.

Bow-sprits for powerboats get an extra interesting option, they can be ordered with Eva Foam Boat Decking as an alternative to BlackLine or teak. Eva Foam has long been used by many powerboat suppliers for flooring. The Båtsystem Eva Foam is of a grey and black design.

Thanks to the new harmonised design of the bowsprits, the original Båtsystem design with its sturdy stainless steel construction can no longer be mistaken. Båtsystem stands for the best quality combined with cost effective series production of bow-sprits and ladders. Often copied but never reached to the same quality standards!
